

DevArt Exts – Dashboard

Overview

The **DevArt Exts Dashboard** is the central control panel of the extension package.

It is designed to provide a **clean, fast, and practical overview** of all available tools, plugin status, and daily actions, without requiring administrators to navigate through multiple Joomla pages.

The dashboard is optimized for:

- High-traffic Joomla websites
- Editorial workflows
- Fast access to reusable content tools
- Minimal clicks administration

Access

Go to:

Components → DevArt Exts → Dashboard

The screenshot displays the DevArt Exts Dashboard interface. The top navigation bar includes the Joomla logo, the title "</> DevArt Exts - Dashboard", version "v1.1.0", and links for "Take a Tour", "demo devart", "User Menu", and "Clean Cache". A sidebar on the left contains a "Toggle Menu" button and a list of components: Home Dashboard, Content, Menus, Components, Admin Tools for Joomla!, Banners, Contacts, DevArt Exts (expanded), Dashboard (selected), Snippets, Code Snippets, Source, Social Share, DevArt Utils, Gantry 5 Themes, News Feeds, PWT ACL, RSForm! Pro, Smart Search, Tags, Users, and System. The main content area features a large banner with the "dev art" logo and "STATHOPOULOS KOSTAS WEB DEVELOPMENT". Below the banner, there are two panels: "Snippets" and "Code Snippets". The "Snippets" panel shows 2 total snippets (2 published), buttons for "Open Snippets", "Options", and "Clear Snippet Cache", and settings for "Snippet cache / settings" (Persistent cache: Yes, Cache lifetime: 300s, Debug mode: No) and "Plugin status" (Content - DevArt Snippets: Enabled v1.1.1, Editor Button - DevArt Snippets: Enabled v1.1.1). The "Code Snippets" panel shows 1 total code snippet (1 published), buttons for "Open Code Snippets", "Options", and "Clear Code Snippet Cache", and settings for "Code snippet settings" (Show title: Yes, Persistent cache: Yes, Cache lifetime: 300s, Debug mode: No) and "Plugin status" (Content - DevArt Code Snippets: Enabled v1.1.1, Editor Button - DevArt Code Snippets: Enabled v1.1.1). An "Options" button is located in the top right corner of the main content area.

Dashboard Structure

The dashboard is divided into functional panels, each representing a core feature of the DevArt Exts package.

Main sections include:

- Snippets
- Code Snippets
- Source / Embed System
- Social Share
- System Status Overview

Philosophy of the Dashboard

The dashboard follows the same logic used in DevArt Utils:

- **Everything important visible at a glance**
- **No unnecessary navigation**
- **Direct access to actions**
- **Clear plugin status visibility**

This allows administrators to:

- Instantly verify system readiness
- Access tools with one click

- Avoid configuration mistakes
- Work faster in daily publishing tasks

Snippets Panel

The **Snippets** section is used for reusable HTML or iframe content that can be inserted into Joomla articles.

Key features:

- Displays total and published snippets
- Quick access to Snippets manager
- Cache control button
- Settings overview (cache, debug mode)

Important note:

Snippets are designed for **safe HTML content only**.

Supported:

- HTML
- iframe embeds

Not supported:

- `<script>` tags
- PHP code

Usage example:

{snippet id=1}

Code Snippets Panel

The **Code Snippets** section is used for displaying formatted code blocks inside articles.

Features:

- Line numbering
- Copy button
- Safe escaped output (no execution)

This is ideal for:

- Tutorials
- Developer articles
- Documentation

Usage example:

{codesnippet id=3}

Important:

Code Snippets **never execute JavaScript, HTML, or PHP**.

Source / Embed System Status

This panel displays the status of the **DevArt Source system**, which is responsible for advanced embeds.

It includes:

- Content Plugin: DevArt Source
- Editor Button: DevArt Source
- Enabled / Disabled status

Purpose:

Allows insertion of advanced external code such as:

- JavaScript widgets
- Third-party embeds
- Video players (e.g. Glomex)
- Custom integrations

Usage example:

```
{source}  
<script src="..."></script>  
{/source}
```

Important:

This feature should be used only for **trusted code**.

Social Share Panel

The **Social Share** panel controls article sharing buttons.

Features:

- Facebook share button
- X (Twitter) share button
- WhatsApp share
- Copy link button
- Open Graph support

Configuration options:

- Button position (recommended: after title)
- Enable/disable each platform
- Lightweight implementation (no external SDKs)

Plugin status is also displayed:

- Content - DevArt Social Share
- System - DevArt Open Graph

Plugin Status Overview

Each dashboard panel shows the current state of related plugins.

Statuses include:

- Enabled
- Disabled
- Version number

Why this matters:

The dashboard does not break if a plugin is disabled.

Instead:

- It shows the current state
- Allows administrators to enable only what they need
- Prevents hidden errors

Quick Action Buttons

Each section includes fast access buttons such as:

- Open Manager
- Options
- Clear Cache

These are designed for daily use and reduce time spent navigating Joomla menus.

Cache Handling

Some panels include dedicated cache controls, such as:

- Clear Snippet Cache
- Clear Code Snippet Cache

This ensures:

- Immediate content updates
- No stale output in frontend

Best Practice

For optimal use of DevArt Exts dashboard:

- Keep only necessary plugins enabled
- Avoid duplicate shortcode plugins (e.g. other {source} or {snippet} plugins)
- Use Snippets for safe content
- Use Source only for trusted scripts
- Clear cache after major changes

Typical Daily Workflow

For editorial websites:

1. Open Dashboard
2. Insert Snippet or Source in article
3. Publish article
4. Use Social Share automatically
5. Clear cache if needed

Total time: a few seconds per article.

Summary

The DevArt Exts Dashboard acts as a **central productivity hub** for Joomla administrators.

It combines:

- Content tools
- Embed systems
- Social features
- System status

All in one place, designed for **speed, clarity, and reliability**.

Snippets

Overview

The **Snippets system** allows you to create reusable content blocks that can be inserted into Joomla articles using a simple shortcode.

It is designed for:

- Repeated content (ads, embeds, widgets)
- Fast editorial workflows
- Clean content management
- Safe HTML reuse across articles

What Snippets Are

A snippet is a reusable content block that can include:

- HTML
- iframe embeds (YouTube, widgets, etc.)

Snippets are **NOT designed for scripts or executable code**.

Important Limitations

Snippets support:

- ✓ HTML
- ✓ iframe embeds

Snippets do NOT support:

- ✗ <script> tags
- ✗ PHP code
- ✗ External JS execution

👉 For those, use **DevArt Source**

Access

Go to:

Components → **DevArt Exts** → **Snippets**

The screenshot shows the 'DevArt Exts - Snippets' management page. The left sidebar contains a 'Toggle Menu' and a list of components: Home Dashboard, Content, Menus, Components, Admin Tools for Joomla!, Banners, Contacts, DevArt Exts (expanded), Dashboard, Snippets (selected), Code Snippets, Source, Social Share, DevArt Utils, Gantry 5 Themes, News Feeds, PWT ACL, RSForm! Pro, Smart Search, and Tags. The main content area features the DevArt logo and the name 'STATHOPOULOS KOSTAS'. Below this is a 'Snippets' section with a warning: 'Snippets accept safe HTML and iframes. Script and PHP code are not allowed here. Use DevArt Source for trusted scripts or advanced embeds. {snippet id="1"}'. A search bar is present. A table lists the snippets:

☐	Title	Alias	Status	ID
☐	code2 ^ (snippet id="2")	code2	✓	2
☐	test code 1 ^ (snippet id="1")	test1	✓	1

At the bottom right of the table, it says '1 - 2 / 2 items'. The footer of the page reads 'Stathopoulos Kostas - DevArt'.

Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

The Snippets list displays all created snippets.

Columns include:

- Title
- Alias
- Status (Published / Unpublished)
- ID

Features:

- Search snippets
- Publish / Unpublish
- Delete
- Quick overview of shortcode usage

Each snippet shows its shortcode:

```
{snippet id="X"}
```

Click:

New

Fields:

Title

Internal name for the snippet.

Example:

- YouTube Video
- Ad Banner
- Newsletter Box

Alias

Optional unique identifier (auto-generated if empty).

Used for:

- Organization
- Future compatibility

Content

Main snippet content area.

Supports:

- HTML
- iframe embeds

Example:

```
<iframe width="560" height="315"
src="https://www.youtube.com/embed/VIDEO_ID"
frameborder="0" allowfullscreen></iframe>
```

Published

Controls visibility:

- Published → usable in articles

- Unpublished → disabled

Using Snippets in Articles

Method 1: Shortcode (Recommended)

{snippet id="3"}

This is:

- Fast
- Stable
- Recommended for production

Method 2: Editor Button

Inside the Joomla editor:

Insert → **DevArt Snippet**

You will see:

- List of published snippets
- ID + alias
- Insert button

Click **Insert** to automatically add:

{snippet id="X"}

Example Workflow

Insert YouTube Video

1. Create Snippet:
 - Title: YouTube Video
 - Paste iframe code
2. Save
3. In article:

{snippet id="3"}

Result:

- ✓ Video is rendered on frontend
- ✓ Clean article content
- ✓ Reusable across multiple articles

Cache Behavior

Snippets may use caching depending on settings.

If changes do not appear:

👉 Use:

Clear Snippet Cache

This ensures:

- Immediate updates
- No stale output

Best Practices

Use Snippets For

- ✓ YouTube embeds
- ✓ iframe widgets
- ✓ Reusable HTML blocks
- ✓ Ads (without scripts)
- ✓ Static integrations

Avoid Using Snippets For

- ✗ JavaScript embeds
- ✗ Tracking scripts
- ✗ Complex external integrations

👉 Use **DevArt Source** instead

Performance Benefits

Using Snippets:

- Reduces duplicate content editing
- Keeps articles clean
- Improves editorial speed
- Centralizes reusable content
- Minimizes errors

Security Design

Snippets are intentionally restricted:

- Scripts are removed on save
- No PHP execution
- Safe rendering only

This protects:

- Joomla core
- Editors
- Website integrity

Summary

The Snippets system is a **fast, safe, and powerful way** to reuse content across Joomla articles.

It is ideal for:

- News websites
- Blogs
- Editorial teams
- High-volume publishing

Code Snippets

Overview

The **Code Snippets system** allows you to display formatted code blocks inside Joomla articles.

Unlike Snippets or Source:

👉 Code Snippets are **strictly for display only**

👉 They **never execute any code**

Purpose

Code Snippets are ideal for:

- Tutorials
- Developer articles
- SQL examples
- PHP / JavaScript documentation
- Technical guides

Key Features

- Escaped output (safe)
- Line numbers
- Copy-to-clipboard button
- Clean formatting

- Reusable via shortcode

Important Behavior

Code Snippets:

- ✓ Display code safely
- ✓ Escape HTML / JS / PHP
- ✓ Never execute code

Not supported:

- ✗ Script execution
- ✗ HTML rendering
- ✗ iframe embeds

- 👉 If you need execution → use **DevArt Source**
- 👉 If you need HTML rendering → use **Snippets**

Access

Go to:

Components → DevArt Exts → Code Snippets

The screenshot displays the 'DevArt Exts - Code Snippets' management page. The sidebar on the left contains navigation links such as 'Toggle Menu', 'Home Dashboard', 'Content', 'Menus', 'Components', 'Admin Tools for Joomla!', 'Banners', 'Contacts', 'DevArt Exts' (expanded), 'Dashboard', 'Snippets', 'Code Snippets' (selected), 'Source', 'Social Share', 'DevArt Utils', 'Gantry 5 Themes', 'News Feeds', 'PWT ACL', 'RSForm! Pro', and 'Smart Search'. The top bar includes a version indicator 'v 5.1.0', a 'Take a Tour' button, a 'demo devart' link, a 'User Menu' dropdown, and a 'Clean Cache' button. The main content area features a header with the 'dev art' logo and 'STATHOPOULOS KOSTAS'. Below the header, there's a section titled 'Code Snippets' with a description: 'Code snippets display escaped code with line numbers and a copy button. They do not execute HTML, PHP, or JavaScript. Use {codesnippet id=1}.' A search bar is present. A table lists the snippets:

☐	Title ↕	Alias ↕	Status ↕	ID ▼
☐	test.sql	test-sql	✓	1

At the bottom right of the table, it says '1 - 1 / 1 items'. The footer of the page reads 'Stathopoulos Kostas - DevArt'.

- Unpublished → hidden

Using Code Snippets in Articles

Shortcode

{codesnippet id=2}

Editor Button

Inside Joomla editor:

Insert → **DevArt Code Snippet**

You get:

- List of code snippets
- ID + alias
- Insert button

Automatically inserts:

{codesnippet id=X}

Rendered result includes:

- Styled code container
- Line numbers
- Copy button
- Clean formatting

Example Workflow

Display SQL Query in Article

1. Create Code Snippet
2. Paste SQL code
3. Save

In article:

{codesnippet id=2}

Result:

- ✓ Clean formatted SQL block
- ✓ No execution
- ✓ Copy button available

Cache Behavior

Code Snippets may be cached.

If updates are not visible:

👉 Use:

Clear Code Snippet Cache

Best Practices

Use Code Snippets For

- ✓ SQL queries
- ✓ PHP examples
- ✓ JavaScript examples (display only)
- ✓ CSS snippets
- ✓ Tutorials

Avoid Using Code Snippets For

- ✗ Executable code
- ✗ Widgets
- ✗ Embeds

Performance Benefits

- Reduces repeated formatting
- Centralizes code examples
- Improves readability
- Speeds up article writing

Security Design

Code Snippets are **fully safe by design**:

- Code is escaped
- No execution possible
- No injection risk
- No frontend impact

Perfect for public websites.

Summary

Code Snippets provide a **clean and secure way to display code** inside Joomla articles.

They are essential for:

- Technical content
- Developer documentation
- Tutorials
- Educational websites

Source (Embed System)

Overview

The **DevArt Source system** allows you to insert **raw embed code and scripts** directly into Joomla articles.

Unlike Snippets and Code Snippets:

👉 Source **executes code**

👉 Source is designed for **trusted embeds only**

Purpose

Source is used for:

- JavaScript embeds
- Third-party widgets
- Video platforms (Glomex, YouTube advanced, etc.)
- Custom integrations
- External services

Purpose

Source is used for:

- JavaScript embeds
- Third-party widgets
- Video platforms (Glomex, YouTube advanced, etc.)
- Custom integrations
- External services

```
{source}  
...your code here...  
{/source}
```

Important Behavior

Source:

- ✓ Executes JavaScript
- ✓ Allows `<script>` tags
- ✓ Supports iframe embeds
- ✓ Supports external integrations

Security Warning ⚠

Source is **not restricted** like Snippets.

This means:

- Code **WILL** execute
- Scripts **CAN** affect your site
- External services **CAN** load resources

👉 Use **ONLY** with trusted code

Access

Go to:

Source Status Panel

The dashboard shows:

- Content Plugin: DevArt Source
- Editor Button: DevArt Source
- Enabled / Disabled status
- Version

This ensures:

- ✓ System is active
- ✓ Editor integration is available

Using Source in Articles

Method 1: Manual Shortcode

```
{source}  
<iframe src="https://example.com/embed"></iframe>  
{/source}
```

Method 2: Editor Button

Inside Joomla editor:

Insert → **DevArt Source**

You get:

- Large textarea
- Paste embed code
- Insert button
- “Insert empty wrapper” option

Example: YouTube Embed

Input

```
{source}  
<iframe width="560" height="315"  
src="https://www.youtube.com/embed/VIDEO_ID"  
frameborder="0" allowfullscreen></iframe>  
{/source}
```

Result:

- ✓ Fully functional video
- ✓ Interactive player
- ✓ External scripts loaded correctly

Advanced Example (Scripts)

```
{source}  
<script src="https://example.com/widget.js"></script>  
<div id="widget"></div>  
{/source}
```

When to Use Source

Use Source when you need:

- ✓ JavaScript execution
- ✓ External widgets
- ✓ Advanced embeds
- ✓ Third-party integrations

When NOT to Use Source

Avoid Source for:

- ✗ Simple HTML
- ✗ Reusable content
- ✗ Static embeds

👉 Use Snippets instead

Performance Considerations

Because Source executes external code:

- Can slow down page load
- Can add external requests
- Can affect CLS / performance

Best practice:

- Use only when necessary
- Avoid multiple heavy scripts per page

Cache Behavior

Source content is rendered dynamically.

If issues appear:

- Clear Joomla cache
- Clear DevArt cache
- Check Cloudflare cache (if used)

Common Issues

Code not rendering

Check:

- Plugin enabled
- Correct `{source}` syntax
- No conflicting plugins

Code appears as text

Possible causes:

- Source plugin disabled
- Another {source} plugin conflict

👉 Disable duplicate plugins

Conflict Warning ⚠️

Many Joomla plugins use the same tags:

- {source}
- {snippet}

👉 Important:

Disable other plugins using same shortcodes to avoid:

- Broken rendering
- Raw code output
- Double parsing

Best Practices

- Use Source only for trusted providers
- Keep code minimal
- Avoid unnecessary scripts
- Test on staging before production
- Monitor performance impact

Summary

The Source system is the **most powerful feature** of DevArt Exts.

It allows:

- Full control over embeds
- Script execution
- Advanced integrations

But requires:

👉 Careful usage

👉 Trusted sources only

Social Share

Overview

The **DevArt Social Share** system adds lightweight sharing buttons to Joomla articles.

It is designed for fast editorial websites that need simple social sharing without loading heavy external SDKs.

Supported buttons:

- Facebook
- X / Twitter
- WhatsApp
- Copy Link

Purpose

Social Share helps readers quickly share articles on social platforms or copy the article URL.

It is useful for:

- News websites
- Blogs
- Magazines
- Sports portals
- High-traffic editorial websites

Yes

Skip existing OG

Yes

Open Options

These component-level settings are read by the DevArt Social Share content plugin.

Social Share Status

Content - DevArt Social Share	Enabled	v1.1.1
System - DevArt Open Graph	Enabled	v1.1.1

If the social plugin is disabled or not installed, this page will continue to load and show its status.

Usage

DevArt Social Share adds lightweight Facebook and X sharing buttons without loading external SDKs.

- Recommended position for news articles: **After title (before intro image)**.
- No Facebook SDK, X JavaScript or external social SDK is loaded.
- Buttons use normal share URLs and open in a new tab.
- WhatsApp is especially useful for mobile traffic.
- Copy Link helps newsroom/admin and desktop users share URLs quickly.
- Safe for high-traffic sites and compatible with caching/CDN setups.

Open Graph / Facebook Debugger

Facebook, Messenger and other platforms use Open Graph metadata to build the shared preview. Make sure your Joomla template or SEO extension outputs correct `og:title`, `og:description` and `og:image`.

Open Facebook Sharing Debugger

Use the debugger after publishing or changing article images, titles or descriptions to refresh Facebook's cached preview.

Social Share Settings

The Social Share page displays the active component settings.

Position

Defines where the sharing buttons appear inside Joomla articles.

Recommended setting:

After title (before intro image)

This position is useful for news websites because sharing buttons are visible immediately before the main article content.

Facebook Button

Enables or disables the Facebook share button.

The button uses a normal share URL and opens in a new browser tab.

No Facebook SDK is loaded.

X Button

Enables or disables the X / Twitter share button.

The button allows visitors to share the current article URL on X.

WhatsApp Button

Enables or disables the WhatsApp share button.

This is especially useful for mobile visitors and news sites with strong mobile traffic.

Copy Link Button

Enables or disables the Copy Link button.

This allows visitors, editors, or newsroom users to copy the article URL quickly.

Open Graph Settings

The same page also displays Open Graph configuration.

Open Graph metadata helps social platforms understand how an article should appear when shared.

Typical metadata includes:

og:title
og:description
og:image

Open Graph

Enables or disables DevArt Open Graph output.

When enabled, DevArt Exts can help generate social preview metadata for articles.

Description Length

Defines the maximum length of the Open Graph description.

Locale

Defines the Open Graph locale.

For Greek websites, `el_GR` is usually recommended.

Facebook App ID

Optional Facebook App ID.

If not used, the page can still generate normal Open Graph metadata.

Image Size

Defines the expected Open Graph image size.

Recommended:

1200 x 630

Twitter / X Cards

Enables metadata support for X / Twitter card previews.

Skip Existing OG

When enabled, DevArt Open Graph avoids overriding existing Open Graph metadata produced by the Joomla template or another SEO extension.

Recommended:

Yes

This helps prevent duplicate or conflicting metadata.

Social Share Status

The status panel shows whether the related plugins are enabled.

It checks:

- Content - DevArt Social Share
- System - DevArt Open Graph

Each row shows:

- Plugin name
- Enabled / Disabled status
- Version number

Usage Notes

DevArt Social Share:

- Adds lightweight Facebook and X sharing buttons
- Does not load Facebook SDK
- Does not load JavaScript social SDKs
- Uses normal share URLs
- Opens share links in a new tab
- Works well with caching and CDN setups

This makes it suitable for high-traffic Joomla sites.

Facebook Sharing Debugger

The page includes a shortcut to the Facebook Sharing Debugger.

Use it after:

- Publishing a new article
- Changing article title
- Changing intro image
- Changing meta description
- Fixing wrong Facebook preview

The debugger helps refresh Facebook's cached preview for a URL.

Recommended Setup for News Websites

For news and editorial sites:

- Position: After title
- Facebook button: Enabled
- X button: Enabled
- WhatsApp button: Enabled
- Copy Link button: Enabled
- Open Graph: Enabled
- Description length: 180
- Locale: el_GR
- Image size: 1200 x 630
- Twitter / X Cards: Enabled
- Skip existing OG: Enabled

Best Practices

Use Social Share with Open Graph enabled for better sharing previews.

Make sure every article has:

- Clear title
- Good intro image
- Useful meta description

For high-traffic websites, keeping the share system lightweight is important because heavy SDKs can slow down article pages.

Summary

DevArt Social Share provides a simple and fast way to add sharing buttons and social metadata to Joomla articles.

It is built for:

- Speed
- Simplicity
- Editorial workflows
- CDN/cache compatibility
- High-traffic Joomla websites

Settings (Configuration)

Overview

The **DevArt Exts Settings panel** allows administrators to configure behavior, caching, and features for all included tools.

It is organized into tabs:

- Snippets Settings
- Code Snippets Settings
- Social Share Settings
- Permissions

Access

Go to:

Components → DevArt Exts → Options

Fallback image

Site name override

Locale

Facebook App ID

Open Graph image width

Open Graph image height

Enable Twitter/X cards

Custom URL Open Graph rules

Select

Leave empty to use Joomla! site name.

el_GR

Optional. Leave empty unless you use a Facebook app. It only removes the fb:app_id debugger warning.

1200

630

No

Yes

One rule per line: match[title|description]image. Example: /contact/Contact/Contact us/images/og/contact.jpg

Persistent Cache

Enables caching for snippets.

- Yes → Faster rendering
- No → Always fresh output

Recommended:

- ✓ Yes for production
- ✓ No for debugging

Cache Lifetime (seconds)

Defines how long snippets are cached.

Example:

300

Recommended:

- 300–600 seconds for news websites
- Lower values if content changes frequently

Debug Mode

Displays debug information.

Recommended:

- ✓ No in production
- ✓ Yes only during troubleshooting

Keep Data on Uninstall

Controls whether snippets remain in the database after uninstall.

- Yes → Data preserved
- No → Data deleted

Recommended:

- ✓ Yes (safer for production environments)

Show Code Snippet Title

Displays snippet title above the code block.

- Yes → Better readability
- No → Minimal output

Code Snippet Persistent Cache

Same logic as Snippets.

Recommended:

- ✓ Yes

Cache Lifetime

Same as Snippets.

Debug Mode

Used for troubleshooting rendering issues.

Keep Data on Uninstall

Same logic as Snippets.

Social Buttons Position

Defines where buttons appear in articles.

Recommended:

- ✓ After title (before intro image)

Show Facebook / X / WhatsApp / Copy Link

Enable or disable each button individually.

Recommended for news sites:

✓ All enabled

Open Graph Settings

Enable Open Graph

Controls whether DevArt outputs OG metadata.

Description Length

Defines max length of OG description.

Recommended:

180

Fallback Image

Image used when article has no intro image.

Important for:

- Facebook previews
- X cards

Site Name Override

Optional override for:

Locale

Example:

el_GR

Facebook App ID

Optional.

Only needed if using Facebook app integrations.

Open Graph Image Size

Recommended:

1200 x 630

Enable Twitter / X Cards

Adds metadata for X previews.

Custom URL Open Graph Rules

Advanced feature.

Allows custom OG metadata per URL pattern.

Permissions (ACL)

Standard Joomla ACL system.

Controls:

- Access Administration Interface
- Create
- Edit
- Edit State
- Delete

Recommended Setup

Super Users

✓ Full access

Editors / Authors

✓ Create / Edit (optional depending on workflow)

Public / Guests

✗ No access

Performance Recommendations

For high-traffic sites:

- Enable persistent cache
- Use 300–600 seconds cache lifetime
- Keep debug mode disabled
- Avoid unnecessary Source scripts

Best Practices

- Use Snippets for reusable HTML
- Use Code Snippets for documentation
- Use Source only for trusted embeds
- Keep Social Share lightweight
- Configure Open Graph properly

Summary

The Settings panel gives full control over:

- Performance (caching)
- Output behavior
- Social metadata
- Access permissions

It is designed to be:

- ✓ Simple for editors
- ✓ Powerful for administrators
- ✓ Safe for production environments
